Linux MultiMedia Studio (LMMS)

Link: https://linux-multimedia-studio-64bits.en.softonic.com/

Category: audio, sound effects

Linux MultiMedia Studio is a software to create and edit your own audio track. Free and downloadable in different languages, LMMS exists for Windows, Mac and Linux.

The advantage of LLMS is that you can compose your own music by using the different synthesisers of the software. It also enables you to download external audio files (MIDI, WAV, MP3 and OGG formats).

The platform is quite intuitive and is addressed for amateurs as well as professionals.
