## Software tutorial

WeVideo

Category: video editing, audio & sound, media library

WeVideo is a simple editing tool which uses a timeline and a stock media library to make your work intuitive.

With this program, you can add music, sound and transitions to your video as well as shorten or lengthen the time of the clips.

The timeline consists of several different tracks: one or more for photos and videos, another one for sound effects and music, and an optional one for text.
