Fake you

Link: <https://fakeyou.com/>

Category: AI music, speech synthesis and voice-to-voice

Fake you allows you to use deepfake technology to generate audio or video of your favourite characters saying anything you want.

In fact, thanks to its features, you can:

- >Generate audio from text
- >Speak with another voice
- > Animate faces with audio

You can transform your messages and your speaking voice into the voice of a character of your choice with just a few clicks, either from text or from your own voice.

Some functions are only accessible with paid membership, but the free version gives you access to many tools.
