Software tutorial

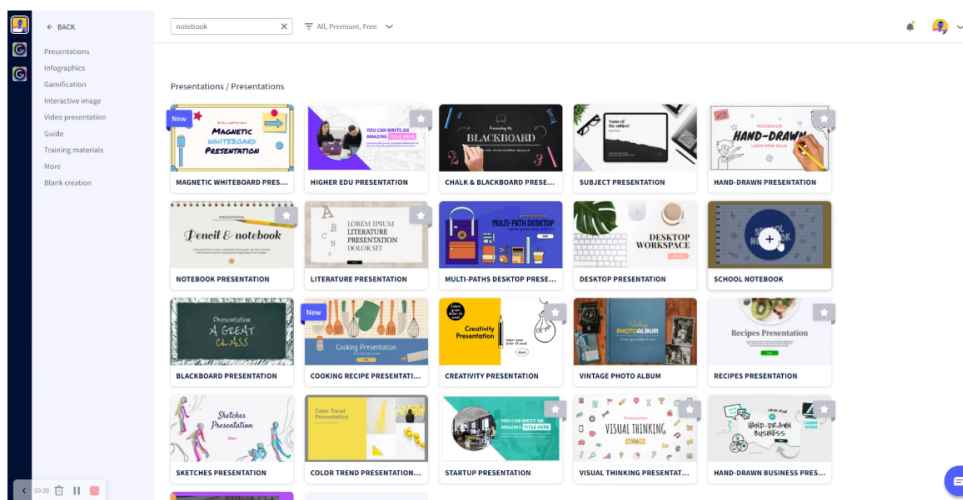

Genially

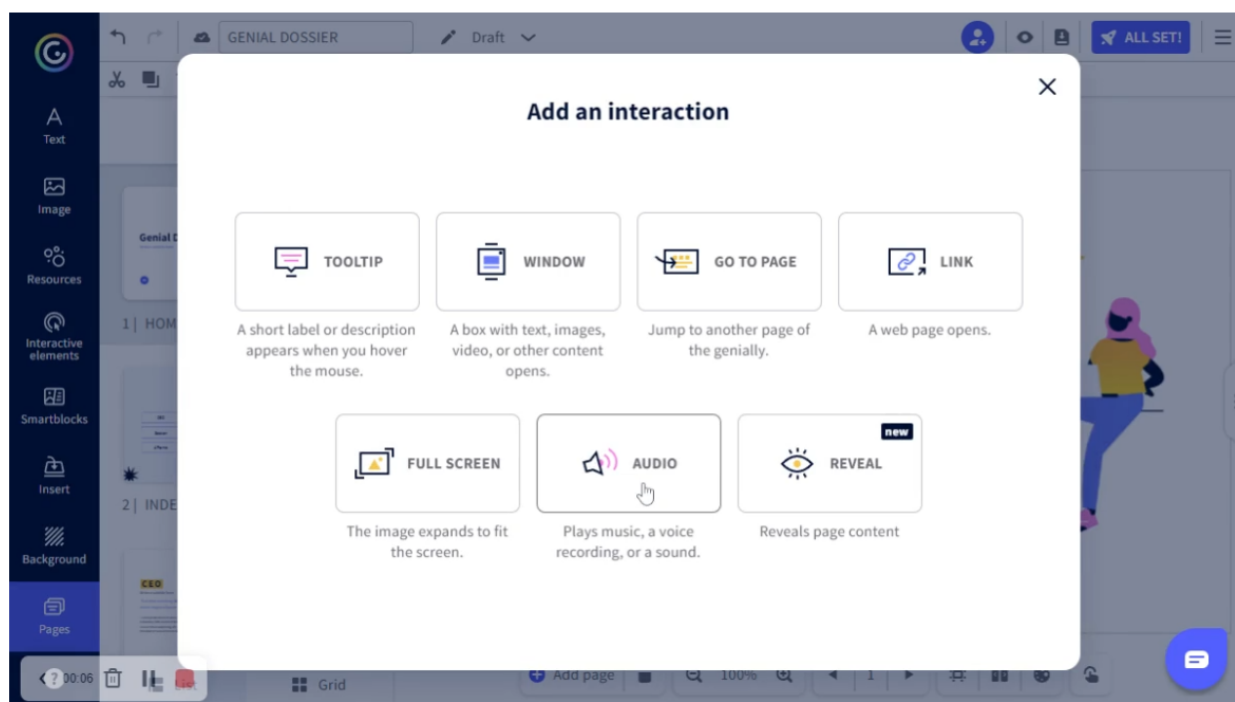

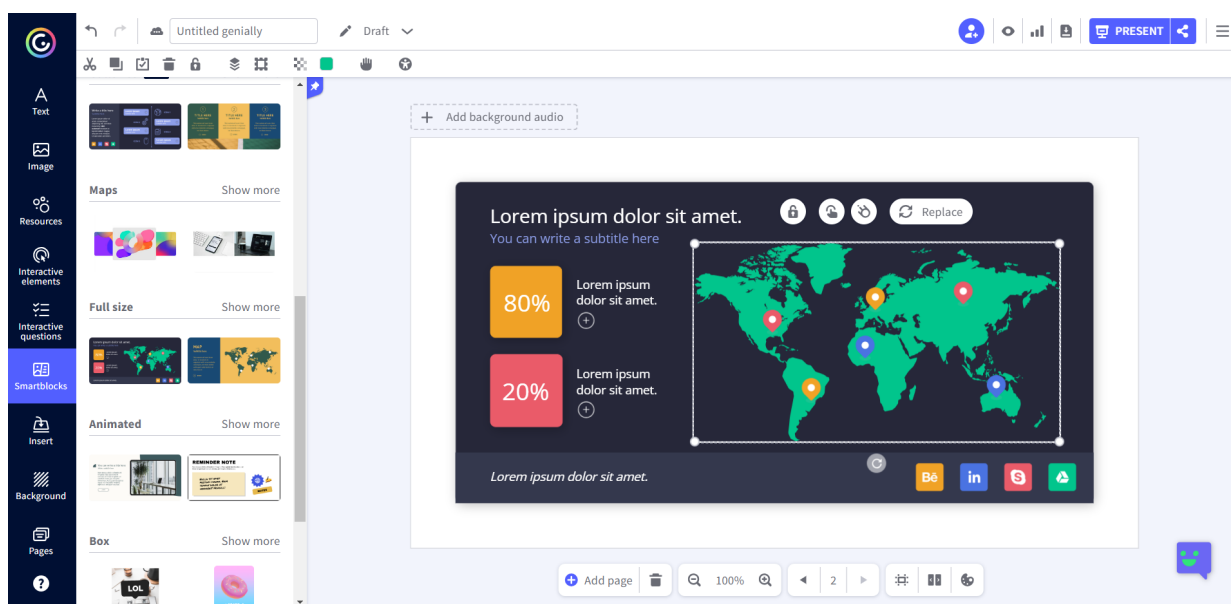

Category: Videos, interactive presentations, games, quizzes

Genially is a very diverse and creative platform for interactive, animated and gamified content. It can be used to create simple animated presentations, graphics or videos, but also quizzes, games, and escape games.

It offers a wide variety of templates, ready for use and modifiable at will, and a library of audio and visual material, along with simple and easy-to-use interactions and gamified functions to make slideshows, tests and quizzes dynamic and engaging.

A free version exists, with enough functionalities to create great content, along with paid versions for students, educators or professionals with access to more options.
