Socrative

### Category: Interactive tests and quizzes

Socrative (teacher version and student version) allows you to create customised quizzes to test your students' learning, deciding questions and answer options (multiple choice, open-ended answers or true/false).
It is a versatile and useful platform from primary school onwards.

Pupils can be invited to participate in the quiz via QR codes that they scan from their device.
The teacher on the PC receives instant feedback, not only on the number of mistakes made, but also on the type of mistake.
